Sysinfo - собираем информацию о удаленном сервере

Опубликовано muff в Чт, 2012-01-19 05:20

Продолжая тему утилит для сбора информации о "железе", рассмотрим такой инструмент как **sysinfo**. Установку утилиты выполним из системы портов:

```
# cd /usr/ports/sysutils/sysinfo && make install clean && rehash
```

Утилита совместима с **dmidecode** и **portaudit**, однако для чистоты эксперимента отказался от интеграции с этими иснтрументами.

Установка завершена... Перед запуском советую ознакомиться с возможностями утилиты:

```
# sysinfo help

SysInfo v1.0.1 by Daniel Gerzo for FreeBSD Operating System

Usage: sysinfo [-a] [-c] [-d] [-h] [-v] [-v [level]] module ...
The following options are available
-a          Display complete system information
-c          Toggle colorful output (useful when redirecting the output to the file)
            The default value can be set in the configuration file
-d          Toggle debug mode
            The default value can be set in the configuration file
-h          Print this help
-i          Toggle info messages
            The default value can be set in the configuration file
-v [level]     Verbose level (0-1), default is 0 (no verbose output)
            The default value can be set in the configuration file
-V          Display version and exit
module       Display the system information related to the specified subsystem type
            The following values are supported:
  bios       BIOS information
  cpu        CPU details
  mem         Memory details
  misc        Miscellaneous information
  network      Network related details
  os         Operating system details
  packages     Information about installed packages
  services    Information about system services
  storage     Details about storage system
  system      System information (hardware related)
  user       User related information

The configuration variables can be set in the /usr/local/etc/sysinfo.conf file.
For more information please see the sysinfo(8) manual page.
```

Что ж... Посмотрим на результаты диагностики, чтобы оценить "возможности " утилиты.

Пример. Информация о процессоре:

```
# sysinfo cpu
 Generated by SysInfo v1.0.1 by Daniel Gerzo

CPU information

Machine class:  i386
```

```
CPU Model:     Intel(R) Celeron(R) CPU 2.80GHz
No. of Cores:   1
Cores per CPU:

WARNING: Your CPU supports amd64 architecture, however you are running i386.
WARNING: You may want to switch to amd64 to get a better performance.

CPU usage statistics:
CPU:  0.0% user,  0.0% nice,  0.4% system,  0.0% interrupt, 99.6% idle
```

***Пример**. Информация о материнской плате:*

```
# sysinfo system
 Generated by SysInfo v1.0.1 by Daniel Gerzo

System information

WARNING: You will need to install the sysutils/dmidecode port in order to obtain this information.

Graphic card information:
vendor='Intel Corporation'
device='82945G Integrated Graphics Controller'
INFO: Check pciconf(8) for more information.

PCI devices with no driver attached:
none0@pci0:0:29:0:    class=0x0c0300 card=0x72671462 chip=0x27c88086 rev=0x01 hdr=0x00
none1@pci0:0:29:1:    class=0x0c0300 card=0x72671462 chip=0x27c98086 rev=0x01 hdr=0x00
none2@pci0:0:29:2:    class=0x0c0300 card=0x72671462 chip=0x27ca8086 rev=0x01 hdr=0x00

```

Network information

hostname: test.muff.kiev.ua

Currently available network devices:
re0 lo0 vlan8

Basic configuration for currently available NICs:

re0: status: active
MAC address:
00:19:e0:74:45:0a

No IP addresses are associated to this NIC.

Input errors: 0
Output errors: 0
Collisions: 0

lo0 ():
IPv4 addresses:
127.0.0.1 netmask 0xff000000

Input errors: 0
Output errors: 0
Collisions: 0

vlan8 (): status: active
MAC address:
00:19:e0:74:45:0a
IPv4 addresses:
195.3.159.254 netmask 0xfffffff8
vlan: 8 parent interface: re0

  Input errors: 0
Output errors: 0
Collisions: 0

INFO: Check ifconfig(8) for more information.

Default route:
195.3.159.249 via vlan8
INFO: For a complete routing table please run netstat -rn.

Firewall related information:
There are 15 rules in /etc/hosts.allow (-rw-r--r--) which affect inetd(8) operation and services linked
against libwrap.
INFO: Check the hosts_options(5) manual page for more information.

IPFIREWALL (IPFW) is enabled.
Firewall type is set to UNKNOWN.
INFO: Check the /etc/rc.firewall (-rw-r--r--) file for its configuration.
INFO: More information about IPFW can be found at
http://www.freebsd.org/doc/en/books/handbook/firewalls-ipfw.html.

Resolver name servers:
8.8.8.8

Socket statistics:
There are currently 23 listening (15 TCP/8 UDP) and 2 established connections.
INFO: For more information please see sockstat(8) manual.

User related information

There are 9 local users (uid > 1000) and 20 system users (uid < 1000).

There are 6 local groups (gid > 1000) and 27 system groups (gid < 1000).

Users in wheel group (allowed to use su(1)):
root,toor,muff,oki,artem,root

Currently logged-in users:

```
muff          p0     193.227.206.114   4:02AM    - w -hi
```

Top 10 logged-in users this month:
```
muff           5.45
```

Last login dates per user:
```
muff          ttyp0   192.168.206.114   Thu Jan 19 04:02:40 2012
oki           ttyp1   192.168.0.2       Fri Mar 27 15:48:04 2009
artem         ttyp2   89.162.237.222    Thu May 13 15:54:35 2010
```

Information related to services

  Running services

```
apache22 is running as pid 673.
cron is running as pid 716.
devd is running as pid 378.
mysql is running as pid 659.
ntpd is running as pid 538.
sendmail_clientmqueue is running as pid 710.
sendmail_submit is running as pid 704.
snmpd is running as pid 662.
sshd is running as pid 697.
syslogd is running as pid 445.
ucc is running as pid 641.
```

Not running services

```
bgpd is not running.
ffserver is not running.
htcacheclean is not running.
isisd is not running.
nmbd is not running.
ospf6d is not running.
ospfd is not running.
proftpd is not running.
ripd is not running.
ripngd is not running.
smbd is not running.
snmptrapd is not running.
teamspeak is not running.
verlihub is not running.
watchquagga is not running.
winbindd is not running.
wpa_supplicant is not running.
zebra is not running.
```

INFO: Configuration of system-wide services is located in the /etc/ directory.
INFO: Configuration of 3rd party services can be found in the /usr/local/etc/ directory.
Misc information

Open file statistics (cur/max):
216/8136 files

Resource limits:
Resource limits (current):
```
  cputime        infinity secs
  filesize       infinity kB
```

```
    datasize        524288 kB
    stacksize        65536 kB
    coredumpsize     infinity kB
    memoryuse        infinity kB
    memorylocked     infinity kB
    maxprocesses      3661
    openfiles         7322
    sbsize           infinity bytes
    vmemoryuse       infinity kB

Information related to cron:
There are 9 entries in /etc/crontab

Current time and date:
Thu Jan 19 04:11:42 EET 2012
```

Рано или поздно, но утилита должна пригодится, как рбочий интструмент. Хотя, чесно говоря, ожидал больше информации о аппаратной части сервера. Но этот недостаток компенсируется с лихвой информацией о софтварной части.
